

FAQ for 4/25/19

There is some intriguing technology being used in our building project, and we thought we would share two things we learned this week. First, the new sanitary lines are wrapped with wires so that, in the future, radio frequency technology can be used to determine the location of these lines without unnecessary digging! Second, you might have seen a look alike for a Mars rover working behind the building. Although our terrain does somewhat resemble the Red Planet these days, you're not seeing a reincarnation of Opportunity. Instead, it is a remote-control operated machine that can compact dirt, allowing the workers free to do more skilled labor (and lets the rest of us watch with fascination).

If you have any questions about the building project, feel free to email us at bptf@templerodefshalom.org
